
AUTOMATED LINE PATROL SYSTEM (ALPS)

ALPS is a simple, yet powerful field data collection and information management tool for overhead and underground distribution systems. It is specifically designed for mobile collection of inspection, maintenance and inventory information, yet has the reporting and data management functionality that allows it to function as a standalone asset management system if desired.

ALPS was designed and developed with extensive input from linemen, patrolmen, inspectors and other field users to ensure ease of use and maximum productivity.

ALPS provides the following functionality:

LINE PATROL

- Point and click forms developed with pen-based computing in mind
- Maintenance order creation and tracking
- Automated photo acquisition

POLE GROUNDLINE INSPECTIONS

- Integrated D-Calc™ pole damage analysis software
- View historical groundline inspection information
- Record additional work performed, i.e. replacing guy guards, ground molding, etc.

INVENTORY

- Simple interface and flexible configuration
- GPS coordinate collection

REPORTING

- Prioritize and summarize work
- Demonstrate compliance
- Several standard reports and charts, or create custom reports
- Filter based on user selected criteria
