

Electric Transmission & Distribution

EDM's wide range of transmission and distribution services include line inspection, assessment, upgrade feasibility, design and operations activities. While EDM has specific expertise in areas related to facility inspection and assessment, the breadth of expertise reaches several areas of T&D related services.

Transmission and distribution services include:

- Inspection and assessment of overhead lines
- Facilities management
- Structural analysis and engineering
- Maintenance planning and forecasting
- Line rating/upgrading
- Line design
- Meteorological studies
- Asset management services and related software

In addition, EDM also offers T&D Services related to:

- Research and Development
- Nondestructive Evaluation
- Forensic Engineering
- GIS Mapping
- Product Testing

EDM has teamed with Intec Services, Inc. to offer additional related services.
